

Define Problem Statements

Date: 11 June 2026

Project Name: E-commerce Application

Customer Problem Statement

PS-1: The Online Shopper

I am: A busy online shopper

I'm trying to: Find and purchase specific electronics and clothing items quickly

But: Existing stores have poor search functionality and confusing checkout processes

Because: Their systems are not optimized, lack proper filtering, and do not save my cart across devices

Which makes me feel: Frustrated and likely to abandon my cart before purchasing.

PS-2: The Store Admin

I am: A business owner / store admin

I'm trying to: Manage my product inventory and track monthly sales

But: It takes too long to update product details and images

Because: The current dashboard is clunky, slow, and doesn't support bulk image uploads or provide clear sales metrics

Which makes me feel: Overwhelmed and worried about business growth.
